

Matthew (02.10.2019 20:16:52): Hello! My name is Matthew. How may I help you today?

Me (02.10.2019 20:17:15): Hi Matthew. I'm looking for the differences between Nano Puff and Micro Puff Jackets. Could you help me?

Matthew (02.10.2019 20:17:39): Absolutely Canberk! Just a moment please

Me (02.10.2019 20:17:59): Thank you Matthew! Sure, I'm waiting.

Matthew (02.10.2019 20:20:16): These jackets are very similar. They both have synthetic insulation, are comparable warmth, are highly wind resistant, and pack into their own pockets. Because of its thinner face fabric, the Micro Puff is a lighter, but less durable performance-oriented option while the Nano Puff will be a little more burly with a face fabric that is roughly twice as thick. Both are fantastic products with their own best uses. I really like my Micro Puff. I took it up a mountain last week and the performance is excellent for climbing, but sometimes I prefer the Nano Puff for more casual outings.

Me (02.10.2019 20:21:58): Wow, thank you so much for amazing, in depth reply Matthew! Really appreciate it.
